The worlds only commercial producer of antifreeze proteins for research and development, a/f protein has a two fold company strategy: a) to realize the potential of antifreeze proteins as benefcial components in the fields of: -hypothermic and cryogenic preservation of biological materials; frozen food quality; medicine(tissue engineering, cryogenic ablation of tumours); cosmetics. B) through the use of transgenic technology, to develop broodstock for aquaculture tailored to the needs of the industry, and displaying such characteristics as rapid growth, increased cold tolerance, and disease resistance. The company's aquadvantagetm salmon exhibit improved feed conversion ratios and growth rates 4-6 times that of standard salmon.

A joint venture between memorial university represented by seabright corp. And researchers in the biochemistry department. Developed and promotes a novel procedure referred to as forensically informative nucleotide sequencing (fins). This process can determine the biological origin of a specimen. A complete range of technology, products and services are offered by bio-id corp. Such as: nucleotide sequencing; genetic analysis for determining biological origin of species(i.E. The species or breed of animal from which the sample came); dna typing; sex determination; pedigree analysis; and paternity testing. As well a complete range of techniques for genetic analysis. Including traditional biochemical genetics using protein electrophoresis(starch gels, polyacrylamide gels, isoelectric focusing, allosymes), chromosonal analysis(karyotyping), and recombinant dna techniques. Bio-id corp. Has an alliance with

association atlangene, nantes,france.

PRODUCTS AND SERVICES

Manufacture award winning vodka made from icebergs. "Canadian Iceberg Vodka" will be manufacturing bottled iceberg water and beer in the near future. We are currently examining the value of pure iceberg water in applications such as: computer chip manufacturing, cosmetics, medicines, burn victims treatment and homeopathic applications.

We are also looking at icebergs as a source of pure air. During the melting process, the air released is cleaner than anywhere else in the world.

It has been recorded that in parts per quadrillion no man made pollutants, such as furons, peps, DDT, etc. can be found... the purest natural source of water on the planet.

PRODUCTS AND SERVICES

Jacques whitford environment limited is a newfoundland-based company of environmental scientists and consulting engineers offering a comprehensive range of consulting, engineering and laboratory services throughout atlantic canada and the offshore. The firm was established in st. John*s in the 1980's when the firms of s. Fudge and associates and ledrew environmental management joined the jacques whitford group of companies.
The track record of jwel is very extensive, with experience in almost every industry and region of newfoundland and labrador. Jwel has established
itself as the premiere environmental consulting firm in the province and the affiliation with the jacques whitford group of companies enables jwel
to undertake a full range of projects under federal, provincial andmunicipal jurisdictions.
Jw group is a multidisciplinary environmental science and engineering firm providing consulting services across canada and internationally. Jwel is a 100 percent employee owned company with 14 offices in canada, two in the united states, joint venture offices in russia and argentina and a project office in china. Jwel currently employs over 450 full-time engineers, scientists and technical support staff. Our experienced and qualified staff provide professional services and training in environmental, engineering, remediation, hydrogeology, environmental sciences and planning, geotechnical engineering, materials engineering, waste management planning, and air quality management. jwel has conducted over fifty environmental assessments of a wide range of
projects throughout canada

PRODUCTS AND SERVICES

The faculty of medicine of memorial university, the youngest of the 16 canadian medical schools, was established in 1967 when dr. Ian rusted was appointed dean of medicine. Under his leadership, faculty members were recruited, the undergraduate program was initiated and the first medical students were admitted in 1969.The existing programs of postgraduate training and continuing medical education were strengthened and the spectrum of medical education was subsequently completed in 1971 with the initiation of a program of graduate studies leading to the degrees of m.Sc. And phd.

Today the faculty of medicine is housed within the health sciences centre, a modern facility which also includes the general hospital, the h. Bliss murphy cancer centre, the telemedicine centre, the centre for offshore and remote medicine (medicor), and the schools of nursing and pharmacy. Modern research laboratories, including the terry fox cancer research laboratories, the hyperbaric medicine research facility, state-of-the-art medical research equipment, the electron microscopy unit and a technical services support unit all support the research endeavour. At the newfoundland centre for health evaluation, research is carried out through the clinical epidemiology unit, the health research unit and the patient research centre. And at the centre for rural health studies, located at the newhook community health centre in whitbourne, about 80 km west of st. John's, the mechanisms of

rural health care delivery are studied.

Areas of research expertise at the faculty of medicine include stroke, cardiovascular disease, liver disease, autoimmunity genetics, population -based epidemiology, clinical epidemiology health service delivery, and molecular biology of cancer and development. Graduate programs are offered in cardiovascular and renal physiology, cell and molecular biology, community medicine, immunology and neuroscience.

PRODUCTS AND SERVICES

The newfoundland environmental industry association (neia) is a non-profit organization incorporated to promote ethical behaviour and high standards for companies that provide enviromental products and services. Neia plays a key role in building a strong provincial industry by: providing a single window for communication between the environment,industry, the public, government, other countries/markets, and industry groups; and representing the interests of the environmental industry in federal, regional, provincial and municipal policy making. Policy development, timely information, networking opportunities, trade facilitation, industry standards, promotion of members, skills development, and unified voice for the newfoundland environment industry.

PRODUCTS AND SERVICES

Established by memorial university of newfoundland in 1987 seabright corporation ltd. Is a not-for-profit organization which identifies and commercializes promising technologies arising from research at the university. In addition to its central role of transferring technology to the private sector, seabright assists the province's small and medium size businesses to access the vast physical and human resources of the university. Seabright is wholly owned by memorial and governed by a board of directors representing industry, academia, and government. Seabright focuses on new technologies, processes, services and products which enhance, improve and/or diversify an existing industry's capability, or create a new industry which does not compete with the existing private sector.
the following biotechnology projects are seeking industry collaboration:
bacterial enzyme used as cheese-making aid
biological control agent for spruce budworm and hemlock looper
novel techniques for designing peptide hormones
scallop hatchery technology
drug delivery system using ldl and a unique biochemical factor
novel genes with application in cancer
diagnostics and therapeutics
extraction of carotenoids and protein from crustacean wastes
liquid organic peat fertilizer

Terra Nova Biotechnology Co. Ltd. (TNB) uses its expertise in immunology and molecular biology to develop, produce and market monoclonal antibodies (MAB) for in vitro diagnostic use. TNB's primary products are blood test kits. These kits have applications in bone marrow transplant (BMT) matching and the diagnosis/prognosis of rheumatoid arthritis (RA) patients. TNB has been certified by SGS International certification services to ISO 9002 for the manufacture of MAB's and in vitro diagnostic kits. In addition to supporting its proprietary products, the company also offers these qualifications and its scientific skills to clients for custom MAB production, research and small batch production.

PRODUCTS AND SERVICES

An experimental fish hatchery, used exclusively for the r&d of unique wild species of finfish. Important aspects of this are the development of broodstocks and fish surivival enhancement, through feeding, rearing and disease control measures. Production of fish serum for use in the pharmaceutical industry. Extration of antifreeze protien from ocean pout, lumpfish, winter flounder, and greenland cod for reasearch and commercial uses. Research by wesleyville hatchery determined that blood from ocean pout is one of the most valuable sources of antifreeze proteins.
